SUMMARY

Versatile and results-driven Software Engineer with over 5 years of experience developing scalable applications and cloud-native services in fast-paced Agile environments. Adept in full-stack development, algorithm design, microservices architecture, cloud infrastructure, development operations, and real-time data processing. Proven track record of delivering reliable, high-performance solutions used by over 10 million users.

WORK EXPERIENCE

Lead Software Engineer | Prompta AI | 2025 - 2026

- Served as sole technical owner, designing architectures and making all technical decisions, while mentoring engineers across backend, frontend, and RAG.
- Rebuilt the RAG pipeline, powering it with a vector database and agentic behavior; reducing response times of ~5 minutes to a matter of seconds, with a significant accuracy increase.
- Led an applied AI project through the Vector Institute program, introducing an LLM-based approach for training an ML model for risk prediction, reaching a score of 91%.
- Led security remediations for a strict enterprise infosec audit as the sole engineer, implementing SSO (through WorkOS & Microsoft Entra) with JIT provisioning and SCIM-based deprovisioning.
- Hardened the cloud infrastructure with: private-IP Cloud SQL, centralized SIEM logging, weekly Prowler scans, CSPM via Google Security Command Center, Privileged Access Management, alongside regular monitoring and access controls.

Full-Stack Software Engineer | MealLens (through Co-op Program) | 2025 - 2025

- Developed an iOS & Android app and a PWA using React Native (Expo)
- Designed and fully implemented a robust backend service using Python and Django.
- Deployed services, databases, and files using AWS EC2, RDS, and S3 for scalable deployments.

Back-End Software Engineer | Neshan Maps & Navigator | 2021 – 2025

- Promoted to assistant team lead; mentored junior developers and improved collaboration across engineering and product teams in an agile environment.
 - Reduced services memory usage by 40%, improved throughput by re-implementing bottleneck modules in Rust/C++ (JNI), and eliminated excessive object allocations in Java.
 - Implemented predictive ETA and departure time algorithms using Java, and RabbitMQ for live-streaming geographic data; achieving ~85% accuracy for suggested departure times.
 - Implemented robust system monitoring using Prometheus, Grafana, and Zabbix to ensure near 100% uptime and early issue detection.
-

EDUCATION

- MSc in Computer Science | University of Windsor | 2023 – 2025
 - BSc in Computer Engineering | Ferdowsi University | 2018 – 2023
-

SKILLS

- **Languages:** Python, JavaScript, Java, Rust, UNIX Shell Scripting
- **Tech Stack:** Django, React.js, Spring Boot, RabbitMQ, gRPC, React Native
- **Databases:** PostgreSQL, Qdrant Vector DB, MongoDB, Oracle, Redis
- **DevOps:** Docker, GCP, AWS, Microsoft Entra, GitHub Actions (CI/CD), Kubernetes
